

THE LATEST EVOLUTION IN A TRADITION OF GREAT MACHINES

WE SPENT THIRTY YEARS TAKING APART AND REBUILDING THE BEST PLOWS TO LEARN HOW TO BUILD AN EVEN BETTER ONE.

The Minimizer Plow is a new design leveraging the best features of tried and true machines with a redesigned main frame providing greater rigidity, less frame flexing, longer hinge wear, and greater balance in the field.

Our patent pending rock shaft system with rephrasing cylinders and internal spherical bearing for a no end play precision controlled leveling system.

A 29-degree blade angle and thicker standard provides less flexing for higher ground speeds and greater vegetation kill.

Firestone radial tires come standard for a wider, more stable footprint and greater carrying capacity.

Front and rear hinge tubing made from 4x5 rectangular tube and designed to provide greater strength. All hinges have 1-1/4" grade 5 bolts.

Hydraulic picker lifts are standard issue for a greater selection of residue management options than ever before.

A longer, sturdier hitch with a redesigned center frame gives more turning clearance and greater level ability in the field.

Adjustable bolt for performance leveling to your exact specifications, reducing fuel costs and making for a smoother pull.

Ground speeds of 7.5-9.5 mph
